Spyphone Shareware

Demo Spyphonestore® holds only the following characteristics:

SMS Re-sending

Report of Incoming/ outgoing Calls

It is limited to 5 reports in the trial version, while the full version holds all the spy unlimited functions, it is totally invisible and has no due date or report limits.

To start the process, enter the date and hour matching your PC and install the software.

Installing the software

The Demo Software is a "SIS" extension file. It must reach the mobile terminal be it through the USB cable or Bluetooth.

Installing Through USB Cable.

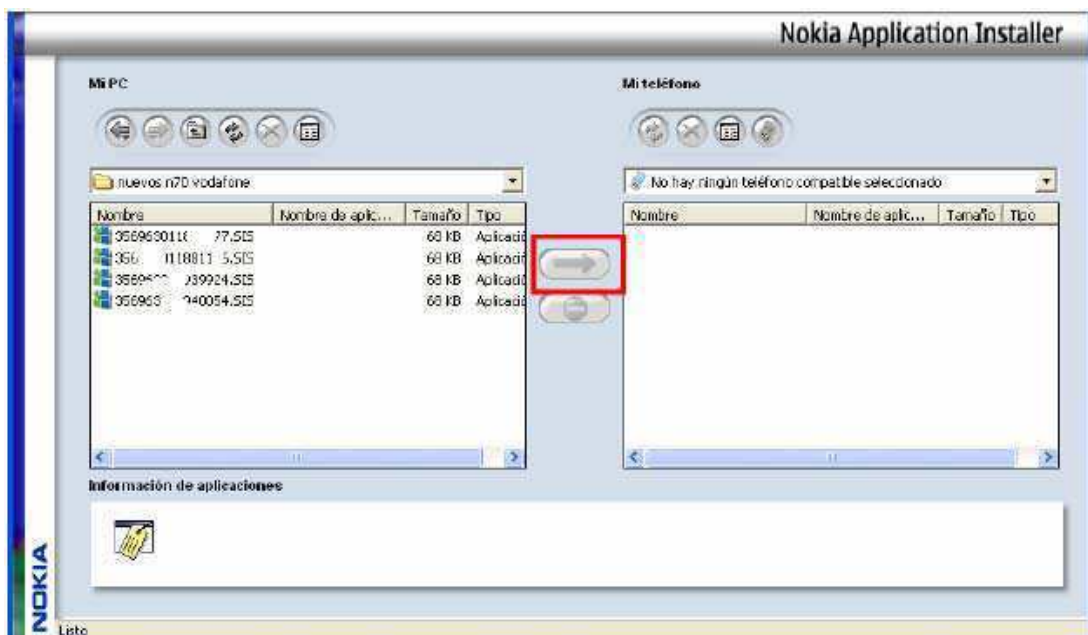

Before sending the file to the mobile terminal you will need to install a software allowing the PC to communicate with the mobile terminal.

We recommend using the software provided by the mobile manufacturer and included with the phone. If you get a Nokia phone you should use the PC Suite program. (You can find the PCSuite soft in the CD provided with the freed phone or otherwise download it from the Nokia official web page for free: www.nokia.es).

Install the PC Suite program following the manufacturer's instructions. Once done, connect the mobile terminal to the PC through the cable. Open the PC Suite program and select INSTALL APPLICATIONS.

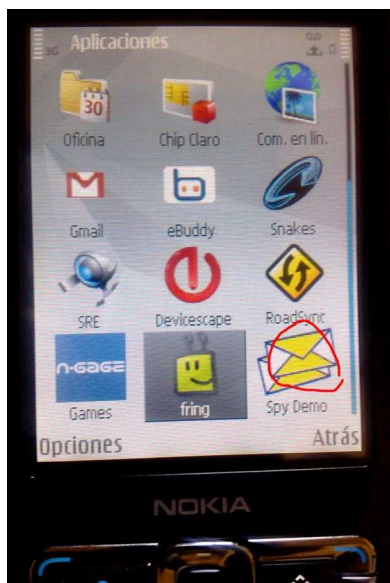

The following screen will open. Look for the file in your PC and press the key highlighted in the picture to send the SIS file to the phone.

(A warning message will show up telling you that the installation is for internal development and dangerous for your mobile. You hit "Accept" anyway and it is ready.)

Setting up the Demo Spyphonestore® Program

1. Go to Applications and execute the Spy Demo Software.

Once the Software is activated, we will set up the monitor -the number to which the reports will be sent.

Now send a SMS message **from the cell phone you want to use as the monitor.**

Example: SMS message to be sent from a cell phone in Buenos Aires, Argentina:

SA12345678 D+54911XXXXXX the "X"s are replaced by the cell phone number to be the monitor, without 0 and/or 15. Please notice that there is a space between 8 and D.

2. Now you are going to activate the functions with the following SMS: **SA12345678 S1**

These two text messages sent should not appear in the incoming tray of the cell phone where the demo has been installed. Otherwise something went wrong –you should repeat all the steps from the start.

Shutt off the spied cell phone for one minute and switch it on again. **Execute the Spyphone® demo again...** and it's ready. To see how it functions, send text messages, make calls and you will see how you get the reports in real time. Remember that the demo version holds only the SMS Re-sending and the Call Report functions. If you want to purchase the Full Version you should visit
